TheraOffice®

.10 Changes

1) Added a new feature in Administrator to allow for facilities to be grouped into divisions.

2) Added a new feature to allow for batches in Accounting to be created per division.

3) Added a new feature to REF segment support in outbound ANSI 837 files which include the internal charge ID number.

4) Added a new hard close feature for clinics that use accrual based accounting.

5) Added a new feature to allow non-provider users to be able to only select certain facilities from the facility selection screen. (This does not override or change any existing permissions)

6) Added a new multi discipline scheduling feature in scheduling.

7) Added a new feature that will clean up tasks generated by the auto task engine that are over 2 years old.

8) Added support for the Z-Pay integration to include the patient's name to make reconciling payments easier.

9) Added the ability for a FOTO predicted score to be over 100.

10) Added a feature to auto rotate a fax that comes in with a bar code to be in the lower right corner of the page.

11) Added additional space in the authorization notes from 500 characters to 2000.

12) Added support for a new Wait List Automator service that will be coming soon.

13) Added a new News feed to the News widget.

14) Changed the right click context menu in the Word processor to include additional features.

15) Changed the layout on the right side of the Document Editor to space controls more efficiently – mostly for 800x600 screen resolutions like the Treatments section.

16) Fixed an issue which was causing the place of service to not save correctly in the Facility screen in Administrator.

17) Fixed an issue which was causing the tab order on the DME added to skip around to random places.

18) Fixed an issue that was causing the batch checks to not check some rules if the condition was set to self.

19) Fixed the icons in the word processor's Insert tab which wasn't displaying the icons on the buttons correctly.

20) Fixed the icons on the full chart tab of the patient navigator which were displaying the image note icon for a report.

21) Fixed an issue when creating a new report from a locked data and choosing any save option causes the report to save under the entry date of 01/01/0001.

22) Fixed a scroll bar that was being displayed in the Functional Reporting section when the screen resolution is in 800x600.

23) Fixed an issue which was causing the common phrase section to jump when double clicking on an item in the grid when in 800x600 screen resolution.

24) Added additional vertical space by removing the "Alerts" header on the top of the patient navigator.

25) Fixed an issue after locking a note and closing back to the Patient Navigator, if you highlight the data and click Document Properties, the Entry Date shows as "0" and other information is editable.

26) Fixed an issue which was preventing the checkbox for Function VIBE to be checked in the schedule at check in.

27) Fixed an issue in the database manager when deleting patients, the OK button wasn't always fully visible.

28) Fixed an issue which was causing the collection letters from being printed correctly.

29) Fixed an issue which was causing the print button the cancel / no show window in Scheduling from working properly.

30) Fixed an issue which was preventing schedule and case users from being able to click the save button on unlocked flex notes.

31) Fixed an issue in the inbound queue when moving a fax to an image note was causing the previous day to be displayed if in Eastern Standard time zone.

32) Fixed an issue which was causing the resource groups box to be blank in scheduling when expanded.

33) Fixed an issue which was preventing the warning from being displayed when adding additional users in Administrator that exceeds the licensed number of users.

34) Fixed an issue when deleting a visit from the organizer where the widget wasn't refreshing automatically.

35) Fixed an issue when choosing the patient in the Locked Document Mover, you are only able to enter the first letter of the patient name. Previous version allows for multiple letters.

36) Fixed an issue when trying to close the Clinic Navigator while a widget is expanded, an unhandled exception occurred.

37) Fixed an issue if a user does not have access to Accounting, Documentation, or Scheduling they can still access it by the most upper right toolbar where the patient search is.

38) Fixed an issue which was not including the fax cover sheet when faxing the Locked Documents area of the Patient Navigator.
